Spatter textures and knockdown finishes are perhaps the most widely installed applications primarily due to the combination of versatility in color and pattern.

Ideal for commercial and residential applications such as driveways, parking garages, sidewalks, patios and especially pool decks, spatter textures and knockdown finishes also offer the added bonus of providing safe skid resistance where chance of rain or sprinklers is applicable.

Achieved with THIN-FINISH™, spatter textures and knockdown finishes were originally designed and engineered to restore surface deteriorated and stained concrete surfaces with a new, yet skid resistant finish, thus eliminating the cost, hassle and downtime of tearing out and replacing the existing concrete substrate.

Because THIN-FINISH™ is an engineered, polymer modified cementitious coating, it is actually stronger and more durable than conventional concrete applications, making it the ideal surface for virtually all concrete.

Popular patterns are achieved by using THIN-FINISH™ in conjunction with QUICK-PATTERN™ stencils. Available in 16 different styles, these stencils offer the unique look that homeowners and architects are looking for.

Color combinations and options are virtually limitless when using PORTION CONTROL COLORANT™.
